

## Advanced Technology for the Isolated Power Industry

By far, the best Line Isolation Monitor on the market is the Mark V LIM. The self-calibrating, self-testing LIM continues the long line of innovations from **PG LifeLink**.

The Mark V LIM has all the features necessary for monitoring electrical leakage in the operating room or patient care area. Transformer load and temperature monitoring can also be added. Many applications require these features, along with the downloading and monitoring of data. Added functionality of real-time monitor management and control is an added feature when combined with **PG LifeLink** LIM-Connect™ software.

The Mark V LIM and LIM-Connect™ software adds advanced cost and time saving features like remote monitoring and operation through a standard PC. All operating rooms can be monitored and LIMS can be operated from a single or multiple remote locations, thus eliminating the need to visit each operating room for a monthly test. The data logging feature meets all JCHOA requirements for reporting.

The **PG LifeLink** Mark V and LIM-Connect™ software package are clearly the industry leader in leakage monitoring, data logging and increased operating room up time.

Contact **PG LifeLink** at **800-287-4123** to discuss your specific needs or visit their website at [www.pglifelink.com](http://www.pglifelink.com).
